## Professional Summary

My research focuses on Generative AI, particularly in deep learning models for image and text generation. I am interested in exploring generative adversarial networks (GANs) and large language models (LLMs) to enhance AI-driven creativity, automation, and problem-solving. My work involves fine-tuning and optimizing models for applications in design, fashion, and intelligent systems. I aim to contribute to advancements in AI by developing more efficient, adaptable, and high-quality generative models for real-world applications.
